

MOSS composites

Specialised in the transformation of thermoset and thermoplastic prepregs with carbon, glass, aramid ,natural fibers and self reinforced plastics to high quality products.

Provides a unique combination of composite product design and manufacturing capabilities and expertise.

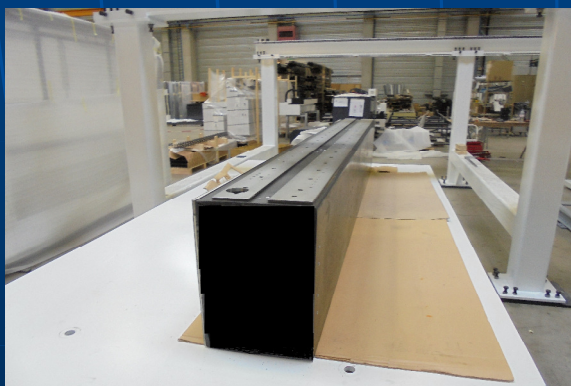

AEROSPACE

MOSS composites has more than 10 years of space heritage in the co-development and manufacturing of high-performance, lightweight precision satellite components and tubes, struts booms and masts

MOSS

composites

Having completed simple to complex carbon composite structures for several spaceflight missions our experienced team consistently demonstrated its ability to deliver and exceed our customers' expectations.

We offer a portfolio of the latest advances in composite solutions, delivering best-value and high performance products and services to our customers.
